

The Effective Organization: Practical Application of Complexity Theory and Organizational Design to Maximize Performance in the Face of Emerging Events.

Project Overview: What the Books About It may not be possible to predict when an organization will confront an operation-challenging event but it is possible to predict the organizations capacity to manage the event when it emerges. (Introduction to Chapter Nine) Performance is the reason why organizations exist. Through performance organizations meet the needs of internal and external stakeholders as defined by their mission, goals and objectives. This is true for all organizations. If a retailer wont stock goods a customer wants, the customer will shop elsewhere. If a religious organization does not meet the needs of its followers, they leave. If a cult doesnt meet the needs of its memberships they seek their goal fulfillment elsewhere. If a manufacturing center cant produce goods that meet customer standards, the customer will reject it. Complexity theory, a tool used to examine the nature of dynamic systems like organizations, can contribute to our understanding of organizations and ways to improve their performance. The models and material outlined in the book illustrate ways competency and organizational programs, processes and procedures are used to manage emerging risks, threats and vulnerabilities that challenge todays organizations. Collectively this information enables the identification of individual organization profiles as a way to advance our understanding of an important theory, complexity, in an applied setting -- organizations. Unique typologies describing organizations (four types), events that effect organizations (six types) and the fundamental structure for organizations are presented to enable the forecasting of an organizations capacity to manage different events as they emerge and how behavior organizes around these events. Academicians studying organizations and practitioners interested in

improving them can use this information to facilitate baseline, descriptive thinking and analysis or more sophisticated examinations aimed at understanding the dynamic nature of organizations as fully functioning systems. At the heart of the effort is the examination of what it takes to get the performance needed to achieve a vision or mission and why, despite planning, training and evaluation, few organizations can guarantee or maintain desired levels of performance when faced with events, routine to extreme, that shape their existence. Particular emphasis is placed on understanding how knowledge, evaluation, information and communication management practices need to be tailored to fit particular organizations rather than treated as a one size fits all approach. These are not limited, theoretical discussions but are presented as ways to efficiently talk about an individual organizations profile or competencies within a class of, or in contrast to, other organizations.
